MEROBEL is offering additional sensors when needed to build regulation systems. The Ultrasonic sensors are usually used for measuring the real time diameter of an unwinding or rewinding bobbin

The position potentiometers are the usual solution for giving the real time feedback of a dancer arm position when using a Position closed loop regulation system. Used together with MEROBEL's Digital Controllers, it's real child's play to install and set-up these devices

Type	Size	Range Max. [Nm]
NR	7	1000 mm
NR	2C	2500 mm
PP	4.7	340 °
